

**AMENDMENTS TO THE CLAIMS**

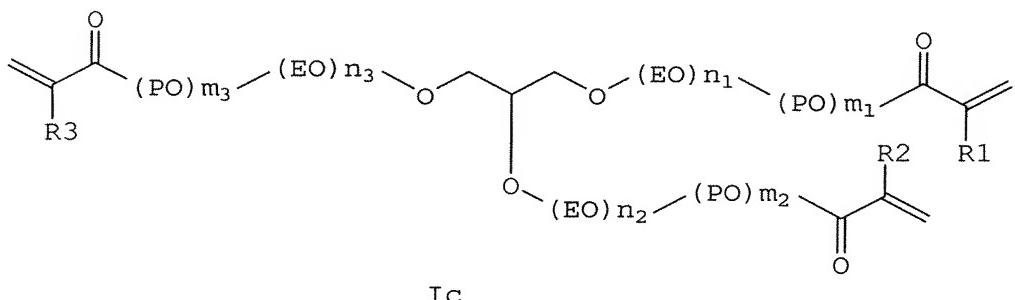

1. (Previously presented) An ester F of formula Ia

or formula Ib

or formula Ic

wherein AO is for each AO independently EO or PO,  
EO is O-CH<sub>2</sub>-CH<sub>2</sub>-,  
PO is at each instance independently O-CH<sub>2</sub>-CH(CH<sub>3</sub>)- or O-CH(CH<sub>3</sub>)-CH<sub>2</sub>-  
a sum of m<sub>1</sub> + m<sub>2</sub> + m<sub>3</sub> + n<sub>1</sub> + n<sub>2</sub> + n<sub>3</sub> is 3, 4, or 5,  
a sum of m<sub>1</sub> + m<sub>2</sub> + m<sub>3</sub> is 1, 2, 3, or 4,  
a sum of p<sub>1</sub> + p<sub>2</sub> + p<sub>3</sub> is 3, 4, or 5, and  
R<sub>1</sub>, R<sub>2</sub>, and R<sub>3</sub> are independently H or CH<sub>3</sub>,

wherein at least one AO is PO and at least one further AO is EO.

2. (Cancelled)

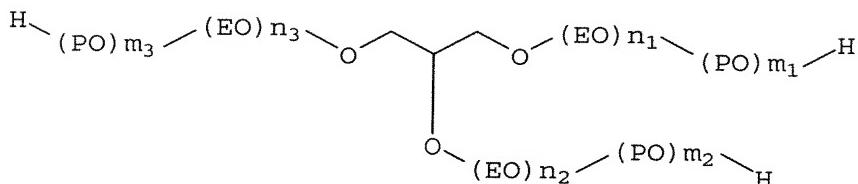

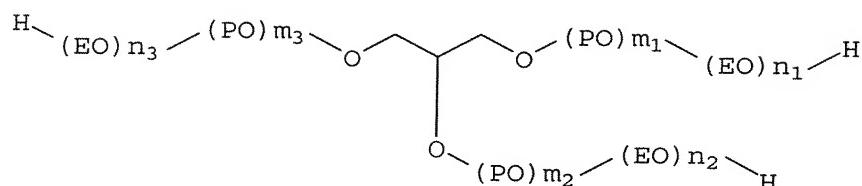

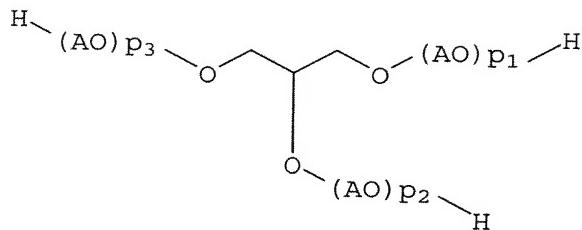

3. (Cancelled)

4. (Previously presented) The ester F of claim 1 wherein the sum of m<sub>1</sub> + m<sub>2</sub> + m<sub>3</sub> + n<sub>1</sub> + n<sub>2</sub> + n<sub>3</sub> or p<sub>1</sub> + p<sub>2</sub> + p<sub>3</sub> is equal to 3 or 5.

5. (Previously presented) The ester F of claim 1 wherein 3 POs are present in total.

6. (Previously presented) The ester F of claim 1 wherein at least one PO is present in each of the 3 alkoxy chains of glycerol.

7. (Previously presented) A process for preparing an ester F of claim 1 from an alkoxylated glycerol of the formula IIa, IIb, or IIc

wherein AO, EO, PO, n1, n2, n3, m1, m2, m3, p1, p2, and p3 are each as defined in claim 1,

and (meth)acrylic acid, comprising the steps of

- a) reacting the alkoxylated glycerol with the (meth)acrylic acid in the presence of at least one esterification catalyst C, at least one polymerization inhibitor D, and optionally a water-azeotroping solvent E to form the ester F,
- b) optionally removing from the reaction mixture some or all of the water formed in a), during and/or after a),
- f) optionally neutralizing the reaction mixture,

h) when a solvent E is used, optionally removing the solvent E by distillation, and/or

i) stripping with an oxygen-containing gas which is inert under the reaction conditions, wherein

a molar excess of (meth)acrylic acid to alkoxylated glycerol is at least 3.15:1 and

the optionally neutralized (meth)acrylic acid present in the reaction mixture after the last process step substantially remains in the reaction mixture.

8. (Cancelled)

9. (Cancelled)

10. (Previously presented) The process of claim 7 wherein the (meth)acrylic acid is not more than 75% by weight removed from the reaction mixture obtained after the last process step, which reaction mixture contains the ester F.

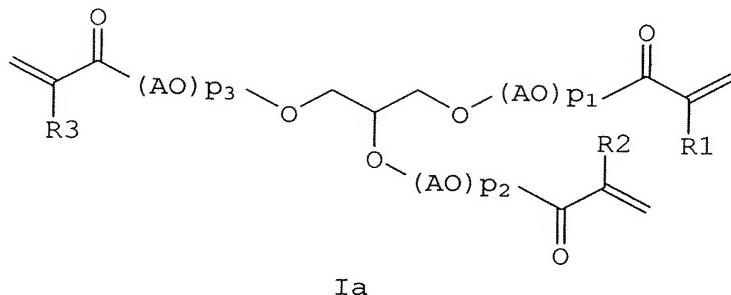

11. (Previously presented) The process of claim 7 wherein the reaction mixture obtained after the last process step, which comprises the ester F, has a DIN EN 3682 acid number of at least 25 mg of KOH/g.

12. (Previously presented) The process of claim 7 wherein the reaction mixture obtained after the last process step, which comprises the ester F, has a (meth)acrylic acid content of at least 0.5% by weight.

13. (Previously presented) The process of claim 7 wherein the molar ratio of (meth)acrylic acid to alkoxylated glycerol in step a) is at least 15:1.

14. (Currently amended) A process for preparing a crosslinked hydrogel particles, comprising the steps of

- k) polymerizing an ester F of claim 1 or an ester F of the formula Ia

wherein AO is for each AO independently EO or PO,  
EO is O-CH<sub>2</sub>-CH<sub>2</sub>-,  
PO is at each instance independently O-CH<sub>2</sub>-CH(CH<sub>3</sub>)- or O-CH(CH<sub>3</sub>)-CH<sub>2</sub>-  
a sum of p<sub>1</sub> + p<sub>2</sub> + p<sub>3</sub> is 3, 4, or 5,  
R<sub>1</sub>, R<sub>2</sub>, and R<sub>3</sub> are independently H or CH<sub>3</sub>,  
with (meth)acrylic acid, optionally an additional monoethylenically unsaturated compound N, and optionally one further copolymerizable hydrophilic monomer M, in the presence of at least one free-radical initiator K, and optionally of at least one grafting base L to provide crosslinked hydrogel particles,

- l) postcrosslinking the reaction mixture crosslinked hydrogel particles obtained from k),  
m) drying the reaction mixture crosslinked hydrogel particles obtained from k) or l), and  
n) optionally grinding and/or sieving the reaction mixture crosslinked hydrogel particles obtained from k), l), or m).

15. (Previously presented) The process of claim 14 wherein AO is EO.

16. (Currently amended) The process for preparing a crosslinked hydrogel particles, comprising steps a) to i) of claim 7 and additionally

k) polymerizing the reaction mixture from one of stages a) to i) if performed, with an optionally additional monoethylenically unsaturated compound N, and optionally at least one further copolymerizable hydrophilic monomer M, in the presence of at least one free-radical initiator K and optionally at least one grafting base L to provide crosslinked hydrogel particles,

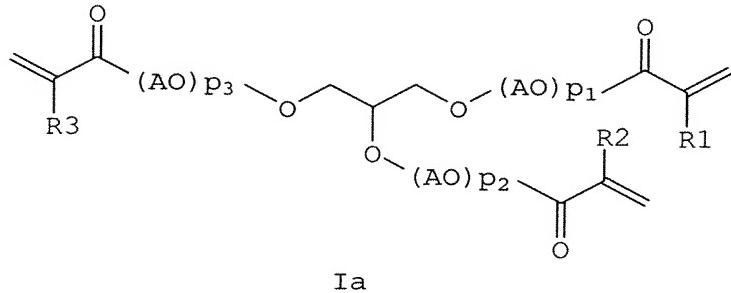

l) optionally postcrosslinking the reaction mixture crosslinked hydrogel particles obtained from k),

m) drying the reaction mixture crosslinked hydrogel particles obtained from k) or l), and

n) optionally grinding and/or sieving the reaction mixture crosslinked hydrogel particles obtained from k), l), or m).

17. (Cancelled)

18. (Currently amended) A crosslinked hydrogel particle comprising at least one hydrophilic monomer M in polymerized form crosslinked with an ester F of claim 1 or an ester F of formula Ia

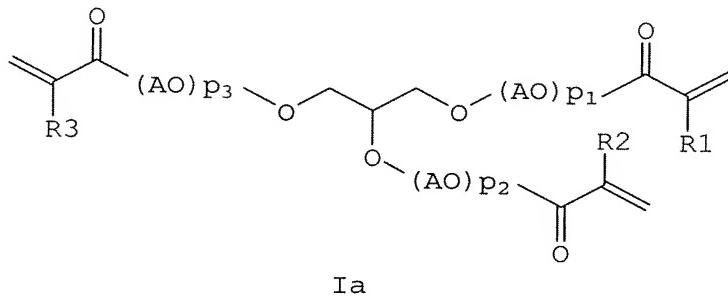

wherein AO is for each AO independently EO or PO,  
EO is O-CH<sub>2</sub>-CH<sub>2</sub>-,  
PO is at least instance independently O-CH<sub>2</sub>-CH(CH<sub>3</sub>)- or O-CH(CH<sub>3</sub>)-CH<sub>2</sub>-  
a sum of p<sub>1</sub> + p<sub>2</sub> + p<sub>3</sub> is 3 or  
R<sub>1</sub>, R<sub>2</sub>, and R<sub>3</sub> are independently H or CH<sub>3</sub>.

19. (Cancelled)

20. (Cancelled)

21. (Currently amended) A composition comprising  
from 0.1% to 40% 5% by weight of at least one ester F of claim 1 or an ester F  
of formula Ia

wherein AO is for each AO independently EO or PO,  
EO is O-CH<sub>2</sub>-CH<sub>2</sub>-  
a sum of p<sub>1</sub> + p<sub>2</sub> + p<sub>3</sub> is 3 or 4,  
R<sub>1</sub>, R<sub>2</sub>, and R<sub>3</sub> are independently H or CH<sub>3</sub>,  
and (meth)acrylic acid,  
0.5-99.9% by weight of at least one hydrophilic monomer M comprising  
(meth)acrylic acid,  
0-10% by weight of at least one esterification catalyst C,  
0-5% by weight of at least one polymerization inhibitor D, and  
0-10% by weight of a solvent E, and  
a diluent G  
with the proviso that the sum total is always 100% by weight.

22. (Currently amended) The composition of claim 21 further comprising a  
diluent G wherein, said diluent selected from the group consisting of water, a mixture of  
water and one or more organic solvent that is soluble in water in any proportion, and a  
mixture of water and one or more monohydric and/or polyhydric alcohol.

23. (Currently amended) A crosslinked hydrogel particle prepared from a  
composition of claim 21 and optionally postcrosslinked.

24. (Cancelled)

25. (Cancelled)

26. (Currently amended) A crosslinked hydrogel particle of claim 14 having a saponification index of less than 11.

27. (Currently amended) A crosslinked hydrogel particle of claim 14 having a residual crosslinker content of less than 10 ppm.

28. (Cancelled)

29. (Currently amended) An article comprising a polymer particle prepared according to the method of claim 14.

30. (Previously presented) The article of claim 29 selected from the group consisting of a hygiene article, a packaging material, and a nonwoven.

31. (Cancelled)

32. (Currently amended) The crosslinked hydrogel particle of claim 26 having a saponification index of less than 8.

33. (Currently amended) The crosslinked hydrogel particle of claim 26 having a saponification index of less than 5.

34. (Currently amended) The crosslinked hydrogel particle of claim 27 having a residual crosslinker content of less than 5 ppm.
